

[Tirana-Elbasan highway project](#) involves a new four-lane highway, 31km long, between Tirana and Elbasan, including a twin bore tunnel of 2.3 km length. This important North-South project in Albania aims to reduce the travel distance by 25 km, increase dramatically the travel speeds, as well as the traffic safety.

Systas implemented the Final highway and Drainage designs of the motorway and 4 Interchanges and contributed to the optimization of the project alignment, providing value engineering services.

Project:

“Construction of Segment No1 in Tirana – Elbasan Road (Km 0 till Tunnel Entrance Km 13)

“Construction of Segment No3 in Tirana – Elbasan Road (Tunnel Exit Km 15.2 till Elbasan city Km 27)”

Owner:
