

[Attiki Odos](#) is a modern motorway that forms part of the Athens peripheral ring road and meets high design standards for high-speed toll motorways. The Project has been implemented on a concession basis. [Systas](#) offered high quality design services for the construction of the urban and suburban motorway sections from Elefsina to the Metamorfosi Interchange, of a total motorway length of 28 km. The designs (Final Highway and Drainage Design) comprising the motorway, nine interchanges, overpasses and underpasses, local road network and tolls were reviewed and approved by the State Independent Engineer.

[Systas](#) also, acting as the central highway designer, provided the most to the coordination of the rest design works (structures, road lighting etc.) that followed a robust Quality Assurance system and the strict time schedule for the construction.

Project:

ATTIKI ODOS

**Design and Construction of
Elefsina-Stavros-Spata-Airport
Motorway, Greece**

Owner:

**Greek Ministry of
Environment, Planning &
Public Works**

Client:

Attiki Odos CJV

Dates:

1996 to 2004
