

Crete Northern Road Axis (BOAK) is the third largest road axis of Greece (after PATHE and Egnatia Odos) with a length of about 300 km, linking all the major urban centers, big harbours and airports of Crete. Its development potential has been recognized and projects aiming to upgrade BOAK to a motorway were included in the European Support Programs.

Systas, as a member of the BOAK Project Manager provided Project management, Design and Tendering services and supported successfully the operations of the local agency EYDE/BOAK, now referred as [Crete Development Organisation](#).

Project:

**PROJECT MANAGER of BOAK,
Northern Road Axis of Crete,
Greece**
